NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue published in December 1956. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by provinces within each industrial group. Revised issues of this memorandum will be published every six months.

The listing comprises the names of entirely new firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Businesses engaged in re-upholstering and furniture refinishing and repair are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such in this memorandum. An establishment reported as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this memorandum should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the Annual Census of Industry, covering the detail of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous memorandum was prepared, 1,893 new names have been added as a result of information received. The names of those establishments appearing for the first time are preceded by an asterisk(*). During this same period, 981 names which appeared in the first memorandum have been dropped from the listing. Of those

.....

deleted, 775 were firms now included in Industry and Merchandising annual reports, 74 when contacted again were found to be out of business and the remainder, 132, were discarded for various other reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this memorandum and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual business operations commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue, "an index or list ..... of particulars taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list or index shall otherwise reveal any of the particulars comprised in any individual return".

June 7, 1957.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue published in June, 1957. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by provinces within each industrial group. Revised issues of this memorandum will be published every six months.

The listing comprises the names of entirely new firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Businesses engaged in re-upholstering and furniture refinishing and repair are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such in this memorandum. An establishment reported as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this memorandum should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous memorandum was prepared, 1,121 new names have been added as a result of information received. The names of those establishments appearing for the first time are preceded by an asterisk(*). During this same period, 976 names which appeared in the first memorandum have been dropped from the listing. Of those

.....

deleted, 725 were firms now included in Industry and Merchandising annual reports, 73 when contacted again were found to be out of business and the remainder, 178, were discarded for various other reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this memorandum and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual business operations commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue, "an index or list ..... of particulars taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list or index shall otherwise reveal any of the particulars comprised in any individual return"

December 31, 1957.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue published in December 1957. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by provinces within each industrial group. Revised issues of this memorandum will be published every six months.

The listing comprises the names of entirely new firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Businesses engaged in welding and repairs to electrical goods which were included in previous memoranda have now been deleted. Those engaged in re-upholstering, furniture refinishing and electroplating and other metal finishing are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such in this memorandum. An establishment reporting as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this memorandum should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous memorandum was prepared, 1,155 new names have been added as a result of information received. The names of those establishments appearing for the first time are preceded by an asterisk(*). During this same period, 558 names which appeared in the memorandum dated December, 1957, have been dropped from the listings. Of those deleted, 207 were firms now included in Industry and Merchandising annual reports, 70 when contacted again were found to be out of business, 50 were duplications because of change in the firm name, and the remainder, 231, were discarded for various other reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this memorandum and certain of the annual

.....

reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual business operations commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue "an index or list .... of particulars taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list or index shall otherwise reveal any of the particulars comprised in any individual return".

June 30, 1958.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue published in June 1958. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by provinces within each industrial group. Revised issues of this memorandum will be published every six months.

The listing comprises the names of entirely new firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Businesses engaged in welding and repairs to electrical goods which were included in previous memoranda have now been deleted. Those engaged in re-upholstering, furniture refinishing and electroplating and other metal finishing are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such in this memorandum. An establishment reporting as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this memorandum should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous memorandum was prepared, 1,100 new names have been added as a result of information received. The names of those establishments appearing for the first time are preceded by an asterisk(*). During this same period, 922 names which appeared in the memorandum dated June, 1958, have been dropped from the listings. Of those deleted, 540 were firms now included in Industry and Merchandising annual reports, 132 when contacted again were found to be out of business, 22 were duplications because of change in the firm name, and the remainder, 228, were discarded for various other reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this memorandum and certain of the annual reports of the Industry and Merchandising

.....

Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual business operations commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue "an index or list .... of particulars taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list of index shall otherwise reveal any of the particulars comprised in any individual return".

December 31, 1958.

Number of New Manufacturing Establishments, 1950-1958	83

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue
lished in December 1958. It contains the names, addresses and principal
ducts manufactured by new establishments which have come into operation
ently, or report that they expect to be in operation in the near future.
enable the examination of new entrants in a particular field or area,
firm names have been arranged by industry and by provinces within each
ustrial group. Revised issues of this memorandum will be published
ry six months.

The listing comprises the names of entirely new firms that have
been in business before, as well as new branch plants of existing
inesses, all of which have indicated that they operate in the manufac-
ing field. Branch sales offices and separate new warehousing facilities
excluded. Change of ownership does not constitute a new firm as it is
entially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard
ustrial Classification except that, in most cases, where the activity
essentially repair in nature, the establishments are not classified as
nufacturers. Dressmakers and businesses engaged in welding and repairs to
ctrical goods which were included in previous memoranda have now been
ected. Those engaged in re-upholstering, furniture refinishing and
ctroplating and other metal finishing are, however, considered as manufac-
ing by the Census of Industry and are, therefore, included as such in this
orandum. An establishment reporting as operating in more than one manufac-
ing field is classified in that sector where the major part of its operations
conducted.

The information contained in this memorandum should be qualified in
w of the fact that there has been no evidence to show whether or not the
firms are in actual production. It has been reported that for every firm
ted, production has recently started or that it is expected to start in
near future but this cannot be considered as solid information until such
e as data are collected in the annual Census of Industry, covering the
ails of the manufacturing operations.

The names listed cover establishments which have come to the attention
the Bureau since the last published annual report for each industry. Since
previous memorandum was prepared, 1,125 new names have been added as a
ult of information received. The names of those establishments appearing
the first time are preceded by an asterisk(*), During this same period,
58 names which appeared in the memorandum dated December, 1958, have been
pped from the listings. Of those deleted, 889 were firms now included in
ustry and Merchandising annual reports, 12 were duplications because of
nge in the firm name, further contact revealed that 101 were out of business
116 were not manufacturers as originally reported, and the remainder, 40,
e discarded for various other reasons. With annual reports being issued
oughout the year, it is impossible to avoid some duplication of firm names
this memorandum and certain of the annual reports of the Industry and Merchandising

.....

Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address, is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue "an index or list .... of particular taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list of index shall otherwise revea any of the particulars comprised in any individual return".

June 30, 1959.

New Manufacturing Establishments, 1950-1958

The following material presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1950 to 1957 and which are still active in the manufacturing field. Data for the year 1958 are the result of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during that year. This, however, is subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

During the period 1950 to 1958 there were 17,488 manufacturing establishments which started operations and which are still active. The number of new entrants increased steadily from 1950, reaching a peak in the years 1955 and 1956, following which there was a marked decline (Table 1). This trend was followed in all industries with the exception of the Iron and Steel Products Industry where the peak was maintained through the years 1955 to 1957 and the decline in 1958 was less severe.

Throughout the period under review the Wood Products Industry accounted for 33.6 per cent of the total number of new establishments, the Foods and Beverages, the Iron and Steel Products and the Clothing Industries together accounted for an additional 35.5 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries, slightly more than 6.0 per cent each.

Provincial distribution (Table 2) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, which together accounted for more than 30 per cent of the total, followed by British Columbia and Alberta where 17 and 7 per cent respectively of the new businesses located. This overall pattern is paralleled in nearly all industries, the most notable exception being in the Wood Products Industry where the heaviest concentration was in the two western provinces. In this industry the number of new establishments in British Columbia was as great as the number located in Ontario and Quebec together.

Breakdown by country of origin (Tables 4 and 5) reveals that 818 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 651, accounting for almost 80 per cent of the total number with foreign origin. The greatest part of this group operated in the Iron and Steel Industry followed by the Chemical Products and the Electrical Apparatus and Supplies Industries. The greatest number of new establishments originating in Canada were firms active in the Wood Products and the Foods and Beverages Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This memorandum revises and brings up to date a previous issue published in June, 1959. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this memorandum will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Dressmakers and businesses engaged in welding and repairs to electrical goods which were included in previous memoranda have now been deleted. Those engaged in re-upholstering, furniture refinishing and electroplating and other metal finishing are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such in this memorandum. An establishment reporting as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this memorandum should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous memorandum was prepared, 1,191 new names have been added as a result of information received. During this same period, 1,397 names which appeared in the memorandum dated June, 1959, have been dropped from the listings. Of those deleted 967 were firms now included in Industry and Merchandising annual reports, 21 were duplications because of change in the firm name, further contact revealed that 163 were out of business and 167 were not manufacturers as originally reported and the remainder, 79, were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this memorandum and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included in this memorandum if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and informatio relating to the nature and scope of operations to be conducted is secured throu solicitors, the establishments are excluded until such time as a permanent busi ness address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operation commencing at some considerable time after this action has been taken.

The information given in this memorandum is limited to that permitted by the Statistics Act, Statutes of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue "an index or list .... of particulars taken from individual returns, of the names and locations of individual firms o businesses, of types of products produced, manufactured or dealt with by indivi dual firms or businesses, but no such list of index shall otherwise reveal any of the particulars comprised in any individual return".

December, 1959.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in December, 1959. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification except that, in most cases, where the activity is essentially repair in nature, the establishments are not classified as manufacturers. Those engaged in re-upholstering, furniture refinishing and electroplating and other metal finishing are, however, considered as manufacturing by the Census of Industry and are, therefore, included as such. An establishment reporting as operating in more than one manufacturing field is classified in that sector where the major part of its operations are conducted.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous report was prepared, 1,149 new names have been added as a result of information received. During this same period, 372 names which appeared in the December 1959 issue have been dropped from the listings. Of those deleted 54 were firms now included in Industry and Merchandising annual reports, 13 were duplications because of change in the firm name, further contact revealed that 111 were out of business and 85 were not manufacturers as originally reported and the remainder, 109, were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

The information is limited to that permitted by the Statistics Act, Statut of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics issue "an index or list .... of particulars taken from individual returns, of th names and locations of individual firms or businesses, of types of products pro- duced, manufactured or dealt with by individual firms or businesses, but no such list of index shall otherwise reveal any of the particulars comprised in any individual return".

June, 1960.

New Manufacturing Establishments, 1950-1959

The following material presents in tabular form the number of manufacturin establishments reporting for the first time in the annual Census of Manufactures in each year from 1950 to 1957 and which are still active in the manufacturing field. Data for the years 1958 and 1959 are the result of a continuous survey o prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. This, however, is subjec to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

During the period 1950 to 1959 there were 18,157 manufacturing establishme which started operations and which are still active. The number of new entrants increased steadily from 1950, reaching a peak in the years 1955 and 1956, follow which there was a decline (Table 1). This trend was followed in all industries with the exception of the Iron and Steel Products Industry where the peak was maintained through the years 1955 to 1957 and the decline in 1958 and 1959 was less severe.

Throughout the period under review the Wood Products Industry accounted fo 32.2 per cent of the total number of new establishments, the Foods and Beverages the Iron and Steel Products and the Clothing Industries together accounted for an additional 35.8 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries, close to 7.0 per cent each.

Provincial distribution (Table 2) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia and Alberta where 16 and 6 per cent respectively of the new businesses located. This overall pattern is paralleled in nearly all industries, the most notable exception being in the Wood Products Industry where the heaviest concentration was in the two western provinces. In this industry the number of new establishments in British Columbia was almost as great as the number located in Ontario and Quebec together

Breakdown by country of origin (Tables 4 and 5) reveals that 902 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 721, accounting for almost 80 per cent of the total number with foreign origin. The greatest part of this group operated in the Iron and Steel Industry followed by the Chemical Products and the Electrical Apparatus and Supplies Industries. The greatest number of new establishments originating in Canada were firms active in the Wood Products and the Foods and Beverages Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location results in the same pattern as the overall picture, with the heaviest concentrati in Ontario and Quebec followed by British Columbia and Alberta.

Table 1 - New Manufacturing Establishments, 1950-1959

By Industry and Year of Commencement

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in ıne, 1960. It contains the names, addresses and principal products manufactured by ew establishments which have come into operation recently, or report that they xpect to be in operation in the near future. To enable the examination of new ıtrants in a particular field or area, the firm names have been arranged by ıdustry and by province within each industrial group. Revised issues of this eport will be published every six months.

The listing comprises the names of firms that have not been in business before, well as new branch plants of existing businesses, all of which have indicated that ıey operate in the manufacturing field. The names of those establishments ppearing for the first time are preceded by an asterisk(*). Branch sales offices ıd separate new warehousing facilities are excluded. Change of ownership does not nstitute a new firm as it is essentially the same business even though it may erate under a new name.

The industrial classification follows the concepts of the Standard Industrial assification except that, in most cases, where the activity is essentially repair nature, the establishments are not classified as manufacturers. Those engaged in -upholstering, furniture refinishing and electroplating and other metal finishing e, however, considered as manufacturing by the Census of Industry and are, there- re, included as such. An establishment reporting as operating in more than one nufacturing field is classified in that sector where the major part of its erations are conducted.

The information contained in this report should be qualified in view of the ct that there has been no evidence to show whether or not the new firms are in tual production. It has been reported that for every firm listed, production has cently started or that it is expected to start in the near future but this cannot considered as solid information until such time as data are collected in the nual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the reau since the last published annual report for each industry. Since the previous port was prepared, 1,127 new names have been added as a result of information ceived. During this same period, 728 names which appear in the June 1960 sue have been dropped from the listings. Of those deleted 364 were firms now in- uded in Industry and Merchandising annual reports, 13 were duplications because change in the firm name, further contact revealed that 176 were out of business d 52 were not manufacturers as originally reported and the remainder, 123, were scarded for various reasons. With annual reports being issued throughout the year, is impossible to avoid some duplication of firm names in this report, and certain the annual reports of the Industry and Merchandising Division. This,however, s been kept to a minimum.

All new establishments, irrespective of size, are included if they report as ing operators in the manufacturing field. In cases where a firm is in the ganizational stage when contact is made and information relating to the nature and ope of operations to be conducted is secured through solicitors, the establishments e excluded until such time as a permanent business address is established. This ocedure is followed as many new businesses apply for letters patent to protect a rm or trade name, with actual operations commencing at some considerable time ter this action has been taken.

The information is limited to that permitted by the Statistics Act, Statute of Canada, 1953, Chapter 45, which authorizes the Dominion Bureau of Statistics to issue "an index or list .... of particulars taken from individual returns, of the names and locations of individual firms or businesses, of types of products produced, manufactured or dealt with by individual firms or businesses, but no such list of index shall otherwise reveal any of the particulars comprised in any individual return".

December, 1960.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in December, 1960. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

Beginning with this issue, the industrial classification follows the concepts of the revised Standard Industrial Classification. The revision results in twenty major manufacturing groups in place of the seventeen groups previously used. The following are the major changes:

1. Knitting Mills, previously included as part of the Clothing Industries, now form a separate group.

2. Furniture and Fixtures, previously included as part of the Wood Industries, now form a separate group.

3. The Iron and Steel Products and the Non-Ferrous Metal Products Industries have been combined and are now treated as three major groups: Primary Metal Industries, Metal Fabricating Industries and Machinery Industries.

4. The printing of house organs has now been deleted from the Printing, Publishing and Allied Industries group.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous report was prepared, 1,110 new names have been added as a result of information received. During this same period, 863 names which appear in the December 1960 issue have been dropped from the listings. Of those deleted 622 were firms now included in Industry and Merchandising annual reports, 18 were duplications because of change in the firm name, further contact revealed that 95 were out of business and 41 were not manufacturers as originally reported and the remainder, 87, were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

NEW MANUFACTURING ESTABLISHMENTS, 1950-60

The following material presents in tabular form the number of manufacturing establishments reporting for the first time in the annual Census of Manufactures in each year from 1950 to 1957 and which are still active in the manufacturing field. Data for the years 1958 to 1960 are the results of a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations commenced during those years. This, however, is subject to revision when the establishments concerned have reported in the annual Census of Manufactures and more solid information is available.

During the period under review there were 16,727 manufacturing establishments which started operations and are still active. The number of new entrants increased steadily to a peak in 1959, with the exception of a decline in 1957 (Table 1). Data covering the year 1960 are expected to be revised upwards. This trend was followed in most industries except Knitting Mills, Clothing, Furniture and Fixtures, Machinery, and Transportation Equipment, where the upward trend was maintained through 1957.

Throughout the period the Wood, Furniture and Fixture Industries accounted for 30.1 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 37.7 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries (excluding House Organs) 8.1 per cent and 6.8 per cent respectively.

Provincial distribution (Table 2) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total followed by British Columbia and Alberta where 15 and 7 per cent respectively of the new businesses located. This overall pattern is paralleled in nearly all industries, the most notable exception being in the Wood Industries where the heaviest concentration was in British Columbia. In this industry the number of new establishments in British Columbia was as great as the number located in Ontario and Quebec together.

Breakdown by country of origin (Table 4 and 5) reveals that 934 new establishments originating outside Canada. Those with affiliation or control in the United States numbered 757, accounting for 81 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries followed by the Chemical Products and the Electrical Products Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Food and Beverages Industries, where domestic raw materials are readily available. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

TABLE 1 - New Manufacturing Establishments, 1950-60

by Industry and Year of Commencement

Industry	Year of Commencement											
	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959	1960	Totals

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date a previous issue published in June, 1961. It contains the names, addresses and principal products manufactured by new establishments which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. Revised issues of this report will be published every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the revised Standard Industrial Classification which shows twenty major manufacturing groups in place of the seventeen groups shown under the old industrial classification. The following are the major changes:

1. Knitting Mills, previously included as part of the Clothing Industries, now form a separate group.

2. Furniture and Fixtures, previously included as part of the Wood Industries, now form a separate group.

3. The Iron and Steel Products and the Non-Ferrous Metal Products Industries have been combined and are now treated as three major groups: Primary Metal Industries, Metal Fabricating Industries and Machinery Industries.

4. The printing of house organs has now been deleted from the Printing, Publishing and Allied Industries group.

In addition to the above, custom tailoring has been deleted from the manufacturing industries and is now classified in the trade field.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Industry, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last published annual report for each industry. Since the previous report was prepared, 1,139 new names have been added as a result of information received. During this same period, 1,665 names which appear in the June 1961 issue have been dropped from the listings. Of those deleted 826 were firms now included in Industry and Merchandising annual reports, 36 were duplications because of change in the firm name, further contact revealed that 389 were out of business and 217 were not manufacturers as originally reported and the remainder, 197, were discarded for various reasons. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry and Merchandising Division. This, however, has been kept to a minimum.

All new establishments, irrespective of size, are included if they report as being operators in the manufacturing field. In cases where a firm is in the organizational stage when contact is made and information relating to the nature and scope of operations to be conducted is secured through solicitors, the establishments are excluded until such time as a permanent business address is established. This procedure is followed as many new businesses apply for letters patent to protect a firm or trade name, with actual operations commencing at some considerable time after this action has been taken.

FOOD AND BEVERAGE INDUSTRIES

Firm name and address	Products
